

Amendments to the Specification

Please replace Paragraph 0039 with amended paragraph 0039 as set forth below.

[0039] As seen in the Figure, the lower portion 9 of the main conduit should exhibit an expansion angle as defined herein. Thus, the cross-sectional area of the main conduit is less, at the intersection with the inlet conduit 11, than further down the main conduit. It is convenient to define this greater cross-sectional area in terms of the angle 20 formed by at least one side 22 of the main conduit with respect to the axis 24 of the main conduit.
